

NOTE: Are you a Parent? Check out How Securly Helps Parents

Who is Securly?

Securly is the leading K-12 solution for students' online safety. Thousands of districts trust Securly to keep millions of students safe online at school and at home.

What is Securly's Vision and Mission?

Vision

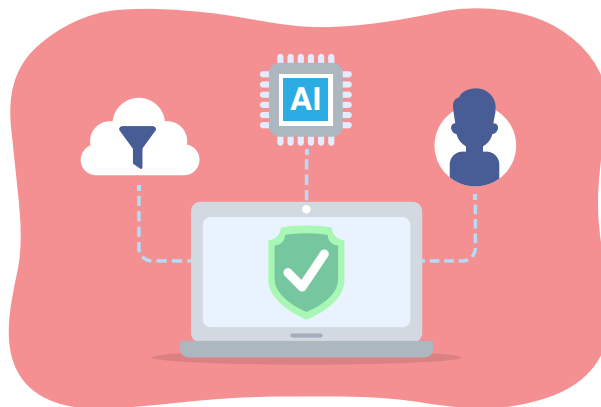

Securly's vision is a digital world that is safer for kids anywhere and at all times.

Mission

Securly's mission is to create solutions that provide online safety to kids on both their school and personal devices. Securly strives to build features that allow schools and parents to work together to nurture and guide children in managing their screen time safely and productively.

How does Securly work?

Without getting too engineering-centric, Securly combines cloud-based filtering, AI algorithms, and human common sense to block the toxicity and inappropriateness of the internet from kids, while providing schools the tools they need to educate and safeguard. By keeping kids safe, we keep schools CIPA and COPPA compliant in order to receive federal funding.

How Securly Helps Parents

Increased Engagement

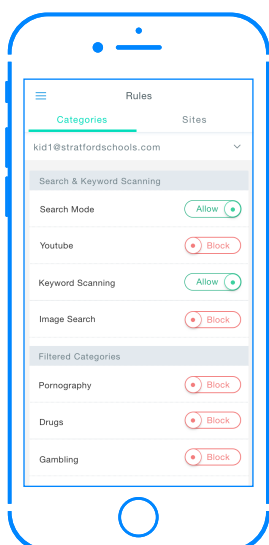

Securly enables parents to engage in the online safety of their children by providing free parental controls for school-issued devices, plus weekly reports on their child's online activity.

Increased Visibility Through Parent Portal

Securly provides parents with a way to view their child's school-owned device and overall online activity, at school and at home. It's called Parent Portal. Once your school registers your email with Securly, you will get a Welcome Email from Securly.

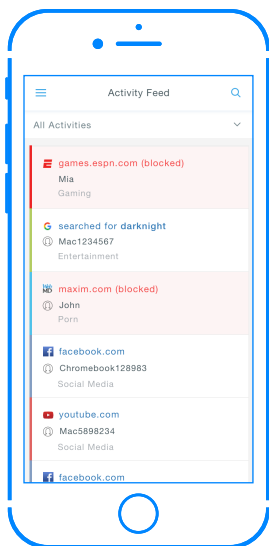

To get started, **simply download the free Securly Home App** to see your child's activity and receive weekly email reports on your Android or iOS device. Note: Parent Portal can be accessed through your browser at this address: www.securly.com/parent-login

With your Securly Home App, you can do 3 things:

1. Filter out stuff you don't want

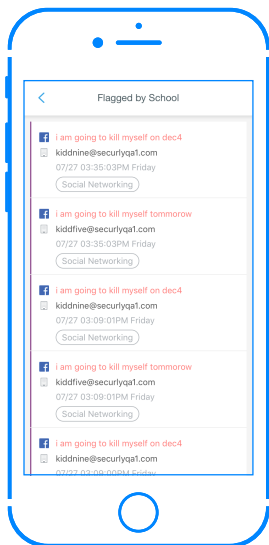

Plug n Play lets kids explore the web safely by turning on the safe search for Google, Bing, and Yahoo. Plus, blocking all other search engines.

2. Know what kids see and connect to what they do

Life is busy. It's hard to know what's happening online with your kids all the time. And, since kids don't always tell you what they're doing, Securly's real-time activity feeds can help you stay in the know.

The activity listing has been segregated according to sites visited, videos searched and watched, keywords searched, social media posts and wiki pages visited.

3. Get smart on anything schools may flag for review

Your school works hard to keep your kids safe and you aware of anything "out of bounds" happening around your child's online safety. Use the "Flagged" tab to check in on anything your school may have surfaced for review.

If you have more than one child associated with your school email account, you can view all children in this Securly Home App view. Depending upon the control levels assigned by the school you can access settings and block or allow various categories, enable safe searches and vary this by the child.

Need Safe Wi-Fi at Home?

Securly's Plug n' Play Hub allows parents to create a kid-friendly Wi-Fi in the home by customizing sites their children can access, plus an ability to view a child's online activity
